

*** FOR IMMEDIATE RELEASE ***

January 21, 2014

Black Creek's *SallyPort*[®] Enterprise-Class Jail Management System Is Going To California

Tehama County Sheriff's Office personnel will assist in the development of *SallyPort*[®] CA, the California-specific version of *SallyPort*[®], which will incorporate California-specific booking practices, forms, standards and reports.

Black Creek Integrated Systems has been awarded a contract to supply its *SallyPort*[®] Jail Management System (JMS) for the Tehama County Jail located in Red Bluff, California. The Jail has the capacity to house 227 inmates and processes approximately 3,600 bookings per year.

Above: Michael Barrett and Chad Gibson from the Tehama County Sheriff's Office discuss inmate management with Black Creek Sales Manager, Randy Hill.

The *SallyPort*[®] system will include modules for booking with digital mugshot capture, arrest/charge/release, inmate property, classification, medical, inmate fund, inmate contacts/visitation, threat group, visitation, video lineup, billing and electronic shift log, a digital logbook which replaces paper logs. In addition, the system will track historical inmate behavior and disciplinary actions and will include a bar-coding interface that allows for laser scanning to track jail operations such as inmate movement, medical dispensing and wellness checks. Additional integration will also be provided for automated data exchange between the national V.I.N.E. (Victim Identification and Notification Everyday) system and for existing live scan fingerprinting, commissary and inmate telephone system applications.

More about *SallyPort*[®]

SallyPort[®] CA will be another in a series of state-specific subsets of *SallyPort*[®], an enterprise-class jail management system from Black Creek Integrated Systems Corp. of Irondale, AL. Unlike other "one app fits all" jail management applications, *SallyPort's*[®] state-specific snap-ins relieve users of the necessity of dealing with superfluous data fields, business rules and reports from other states that do not apply to their operation. Workflow-related snap-ins provide additional functionality necessary for the efficient operation of larger facilities that would be cumbersome and unnecessary in smaller facilities. *SallyPort*[®] provides jail administrators with a comprehensive set of tools to manage their jail operations from intake through release regardless of the size or geographical location.
