Erie County, New York Goes “Live” with Black Creek Enterprise-class Jail Management System

Black Creek is pleased to announce that **SallyPort NY[®]** is now online at the Erie County Sheriff's Office in Buffalo NY. The two facilities, with a total combined capacity of 1,750 beds and over 30,000 bookings per year, went live on February 16th. The total time to complete the conversion was 2 days. In that time, a total of 134,002 inmate records and 468,120 booking records were converted to the new system. Sgt. Joseph Usinski, Sgt. Tony Diamond, Sgt. Karen Yetzer and Deputy Denise York were instrumental in the cutover. Erie County is now connected to Black Creek's **SPIDEX[®]** (SallyPort[®] Inmate Data Exchange) network of 34 New York Jails – which allows those agencies to send and receive inmate

information between linked facilities.

Superintendent Thomas Diina discusses his experience with the SallyPort NY[®] implementation:

“We are very excited to have implemented the SallyPort[®] JMS in our facilities. The transition process was a daunting task for sure, but Black Creek’s staff worked tirelessly with ours to accomplish this goal. They are a top-notch outfit that has been a pleasure to work with, and I look forward to a long and mutually beneficial relationship!”

More about SallyPort[®]

SallyPort[®] NY is one in a series of state-specific subsets of **SallyPort[®]**, an enterprise-class jail management system from Black Creek Integrated Systems Corp. of Irondale, AL. Unlike other “one app fits all” jail management applications, **SallyPort's[®]** state-specific snap-ins relieve users of the necessity of dealing with superfluous data fields, business rules and reports from other states that do not apply to their operation. Workflow-related snap-ins provide additional functionality necessary for the efficient operation of larger facilities that would be cumbersome and unnecessary in smaller facilities. **SallyPort[®]** provides jail administrators with a comprehensive set of tools to manage their jail operations from intake through release regardless of the size or geographical location.
